

Contribution Journal

Steven completed his lab exercise, reflection, created the repo and pushed pdf copies of the ipynb and word doc from a local clone to the repo. He also made a discussion post and added the other group members to the repo so they can upload their contributions. He reached out again Monday to follow up with the progress. He saw Khin did not push her work to the repo, so he offered to help her last minute. He wrote the contribution journal and pushed it to the repo and submitted the link.

Christian helped explain the lab having done it through early on and submitted the ipynb as a direct upload from google colab then also submitted the reflection and notebook as a pdf. He replied to Khin's questions to help her complete the assignment using the discussion post on Canvas.

Khin sought help and clarification from the group the evening of the due date through the discussion post on Canvas and with help from her team was able to push her work to the repo before the due date.

Antonio ignored the group discussion post and direct message about how to work as a group and submitted a pdf of his lab work on his own directly to canvas.
